Photoshop 2022 (Version 23.1)

This may be the simplest change in the entire update. Now you can add an icon—in Photoshop’s library of premade elements (like the ones used by other apps in your toolbox)—that automatically opens the Organizer when you click on it, rather than first creating a new image in your project and then opening the Organizer in that project. You can also drag to reorder this icon’s position, if you wish. With Photoshop’s new Arrow Adjustment Layer feature, you can drag an existing adjustment, like a Levels or Curves adjustment, directly on top of a new layer in the adjustment panel. That means you can quickly and easily experiment with different adjustments for a specific area of the image without creating a new layer, a hassle in Photoshop since it can be cumbersome to undo or correct changes. Photoshop now has Photoshop Sketch, a line, shape, and object creation tool. It may not be quite as robust as other digital illustration apps, but it does bring a lot of Photoshop’s features to vector drawings. The 1Draw tool works like other drawings, with four options: Draw, Draw with Stroke, Draw with Stroke and Repeat, and Erase. (The Erase option is hidden at the bottom of the Draw menu.) You start by choosing a drawing tool, then begin creating strokes, lines, and shapes with a curved, pointed, or square pen. You can also use the previous drawing tool’s effect options to vary the thickness or direction of your lines, or to color the strokes. Software is constantly downloading updates and fixes to the latest versions. This might explain, for instance, why the Exporting tool occasionally freezes when trying to send a batch of images for export. Most of the other tools were working fine, though. I also tested whether the speed problems are caused by the image resolution, and they are definitely not. At least, not for those images that I had opened up in one of the tests. Maybe this issue is caused by the very large image sizes that people are now using in these social platforms. However, too large a resolution may lead to problems for older and slower computers. Shouldn’t the software somehow be able to run faster? Not really - Photoshop does not use your own CPU, does not ask you for system resources or memory, etc. Each tool or feature that you use comes with its own RAM footprint, CPU cycles and disk space requirements. They are all implemented on the fly, as the software is opened and “installed”, and they take up RAM or hard disk space as they are needed. You can’t really blame Adobe for this. It’s a pretty typical free-time, weekend software! Obviously, Photoshop does take some CPU cycles and RAM resources, but, as a whole, it does not seem to be much of a design issue to me personally, although too little RAM could hardly be a good thing, and, of course, too little hard disk space. Overall, I would have expected some definite improvements in Resource Management, to name but one thing. Not much, but still more than nothing.
