Like any modern operating system, Photoshop CC is abandoning the old idea of the file system in favor of a structured system of folders and application inside of folders. That's not a bad thing, but it does mean you have to rethink your workflow. With the new app structure, you'll no longer have all of your Photoshop files in one specific folder. Instead, groups of related items will be stored in several different folders. Coming from the old way of thinking, that can be a challenge. Adobe Photoshop is the industry standard for the photo and graphic design community. The workflow features which have made it so enduring over the years are just as you'd expect:

Update a pixel-perfect image every day

Precise object selection

Some nice tools for non-destructive editing

Save time using the revamped Adobe Bridge and for remote creation/collaboration

Perform rapid fixes as well as complex, fully automated editing

As you might expect, this preview of Photoshop CC boasts the most exciting updates ever seen, and reek of crossover creativity for a more productive life for the modern user. For all users, the new version has a number of tools that simplify photo editing. For example, the Transform Magic feature, which lets you quickly stretch and stretch and rotate a photo to an instant-group or macro. A new Clone Merge feature lets you merge duplicate photos. A powerful, new hole-filling tool allows you to fill an image with a solid color, gradients or textures. A new Stretching and Smoothing feature, that lets you quickly increase or decrease the graininess or blur or sharpness of an image.

A photograph of a building has multiple areas of color, ranging from dark tan to deep blue. A color image of a tablecloth has many patches of color: some patches are white, others are teal, and others are purple. How do you capture all of these levels of complexity in a single image? Building a new product requires a substantial investment of time spent in research and development. This effort could be focused on creating a new product that will disrupt the world, or it could be a small but serious improvement to a product that already exists. We want to ensure that your experience is successful, easy to use, and most importantly, we want to make sure that you feel good about using our products.
